

PRD - Redefine

Gloria Yang, Ho Lip Kiat, Elena Laso

2 Oct 2025

PRD Redefine Guidelines

Product Requirements should be clearly defined and focus on :

- Customer-facing improvements, visible touchpoints
- Insight-driven requirements.

In PRD Scope

Product Specific requirements

- Performance/Feature
- Quality Improvement & Serviceability
- Telemetry

Extended supporting document

Common across all products

- Safety & Regulatory compliance
- Environment & Sustainability compliance
- HW Reliability

Out of PRD Scope

- Documentation and Process
- Test Setup /Fixture
- Design For Manufacturing
- Cost Reduction

Guidelines

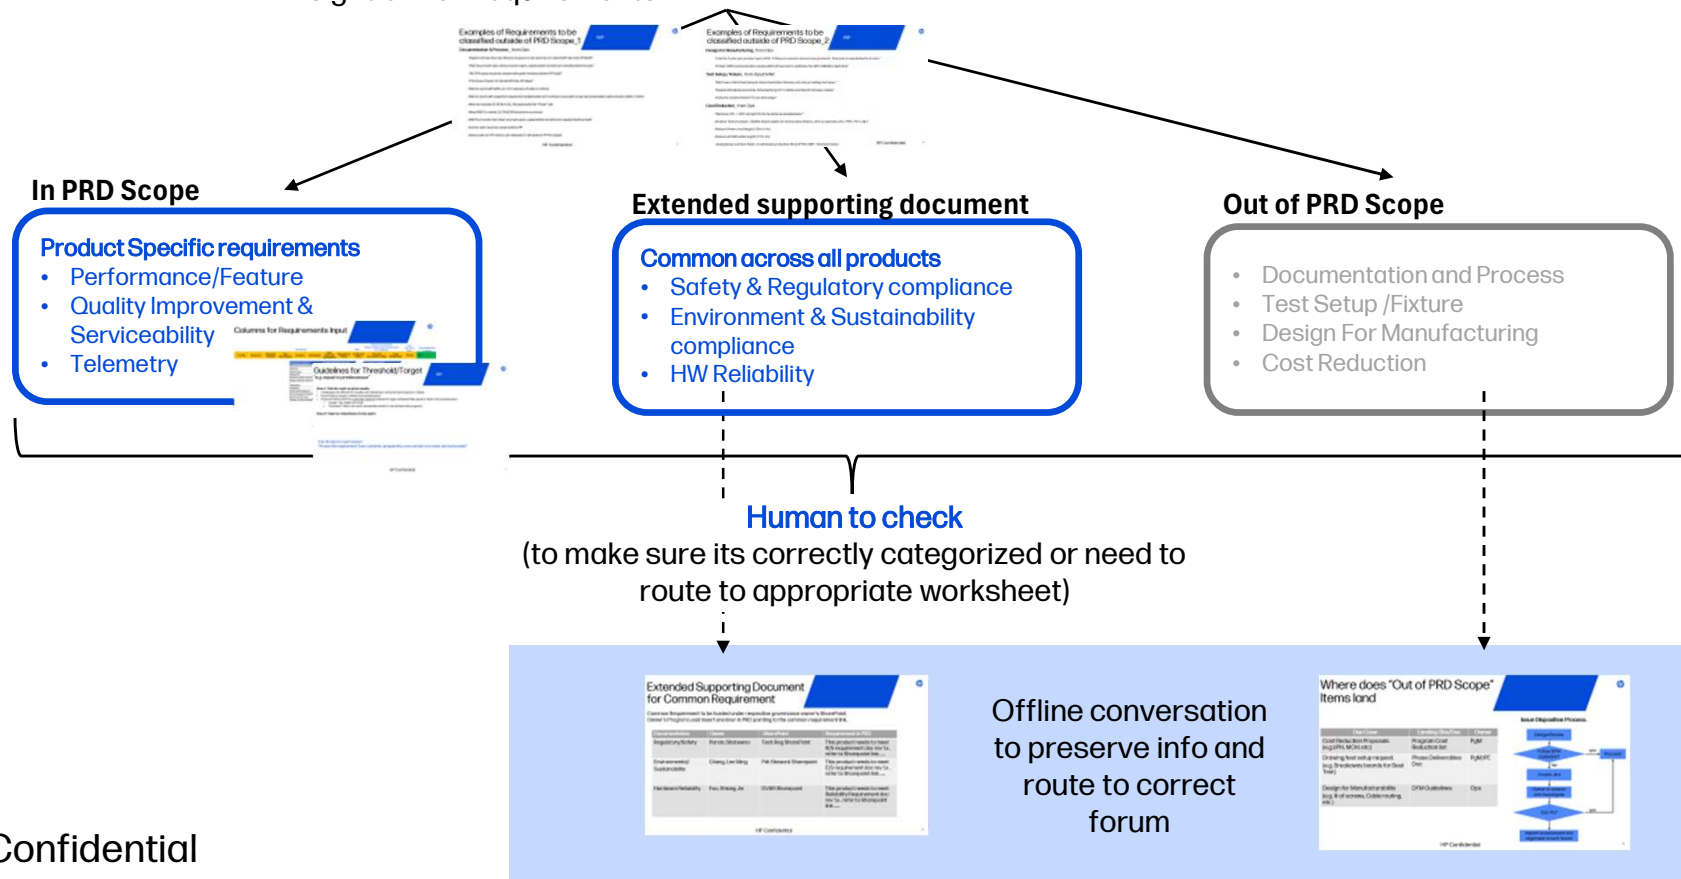

- Requirement threshold/target needs to be specific and not reference to "Equal or better than Predecessor"
- Functional and experience improvements require measurable metrics
- Channel request for Feature requirement/ Experience & Warranty Improvement to Function owners (Marketing/ GxD/ TME) for holistic assessment
- Do Not Include Best Practices

PRD Redefine - Summary

Product Requirements should be clearly defined and focus on :

- Customer-facing improvements, visible touchpoints
- Insight-driven requirements.

Extended Supporting Document for Common Requirement

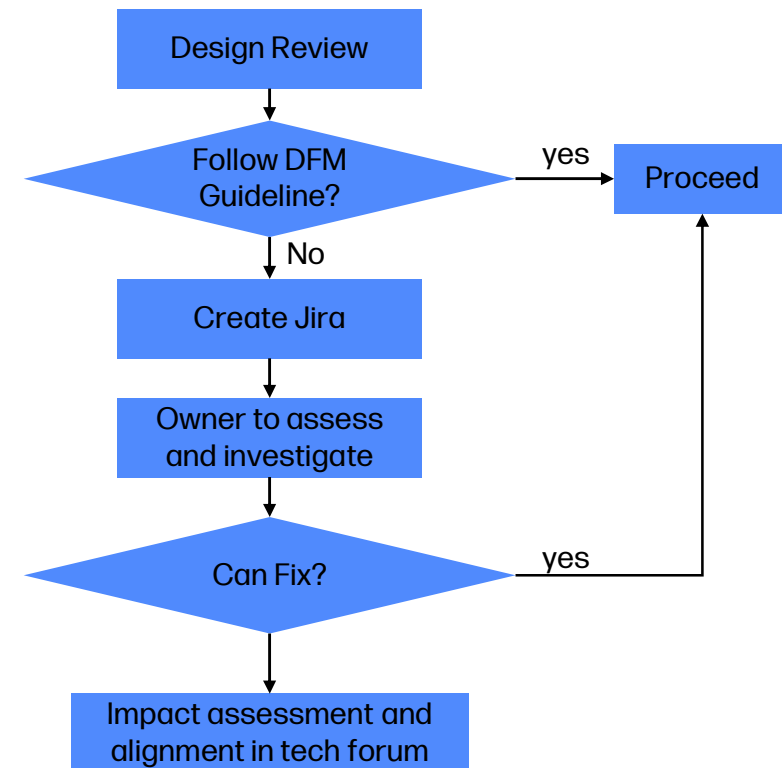

Common Requirement to be hosted under respective governance owner's SharePoint.
Owner's Program Lead insert one liner in PRD pointing to the common requirement link.

Documentation	Owner	SharePoint	Requirement in PRD
Regulatory/Safety	Parvin, Shabeena	Tech Reg SharePoint	This product needs to meet R/S requirement doc rev 1.x , refer to Sharepoint link
Environmental/ Sustainability	Chang, Lee Ming	Pdt Steward Sharepoint	This product needs to meet E/S requirement doc rev 1.x , refer to Sharepoint link
Hardware Reliability	Foo, Shiang Jin	DVAR Sharepoint	This product needs to meet Reliability Requirement doc rev 1.x , refer to Sharepoint link

Where does “Out of PRD Scope” Items land

Issue Disposition Process.

Use Case	Landing Site/Doc	Owner
Cost Reduction Proposals (e.g. UPH, MOH, etc)	Program Cost Reduction list	PgM
Drawing/test setup request. (e.g. Breakaway boards for Best Test)	Phase Deliverables Doc	PgM/PE
Design for Manufacturability (e.g. # of screws, Cable routing, etc)	DFM Guidelines	Ops

Guideline to classify requirements outside of PRD Scope

WIP

If requirements does not meet the following criteria:

- *Customer-facing improvements, visible touchpoints*
- *Insight-driven requirements*

OR

If any requirement is similar to the examples listed below

Then

- Save these requirements to a separate worksheet.
- Human will check what was taken out from the PRD. Highlight if certain items need to be put back.

Guidelines for Threshold/Target

“e.g. equal to predecessor”

WIP

Case 1: Pick tire mark on photo media

- Challenges: Its difficult for Quality and marketing to write technical specs or values.
- Past Practice: equal or better than predecessor
- Proposal: State what the customer expects instead of vague statement like equal or better than predecessor
 - Target = No visible tire mark
 - Threshold = Minor tire mark acceptable (metric to be defined with program)

Case 2: Improve robustness of case parts

Can AI help for such cases?

Phrase the requirement from customer perspective, more words to be clear and actionable?

Examples of Requirements to be classified outside of PRD Scope_1

WIP

Documentation & Process_ from Ops

"Expect all new first set fixtures & specs to be done by LP, latest MP. Not into PP/SOR"

"R&D to provide Ops clear process spec, expectation & what are needed before build"

"All DFA issue must be closed with path forward before PP build"

"ECLN pre-frozen for RoHS RCD by PP-8wks"

R&D to work with MPa on CCC waivers (If ship to China)

R&D to work with ship/test respective stakeholder (if in China) to provide scrap documentation with photos within 3 mths

Need to include EE BOM in ELCN especially the "Flash" tab

Need R&D to check ELCN BOM structure accuracy

R&D to provide Ops clear process spec, expectation & what are needed before build

Anchor plot must be ready before PP

Seed code for PP need to be released 1 mth before PP PCA build

HP Confidential

Examples of Requirements to be classified outside of PRD Scope_2

WIP

Design for Manufacturing_ from Ops

"Limit to 2 color per product upon SOR . If there is common tool across products. That part is only limited to 2 color."

"Printer USB communication ready within 20 second to optimize the MFG CIMation test time"

Test Setup / Fixture_ from Ops/DVAR

"R&D own critical test/assy & characterization fixtures, not only providing test spec. "

"Require Breakaway boards, Extended long FFC cables and Serial Harness cables"

"0.5m/1m Control Panel FFC for test setup"

Cost Reduction_ from Ops

"Remove LDV -> 4HC, Accept PQ to be same as predecessor"

No Boot Time increase, ~\$250k fixture adder for every extra 20secs, 4HC to operate LDV / PPR / PVT / MLT

Reduce Power cord length (1.5m to 1m)

Reduce all USB cable length (1.5 to 1m)

Avoid glossy surface finish, to eliminate protective film (CP Film WIP + Scanner base)
